

EDUCATION**University of California Berkeley****Berkeley, CA****Aug 2020 – May 2024**

- B.S. in Electrical Engineering and Computer Science
- Technical GPA: 3.667
- Minor in Ancient Greek and Roman Studies

EMPLOYMENT**SWE Intern****Amazon AWS S3****May 2023 – Aug 2023**

- Implemented data center cellularization of regional throttling of lifecycle transitions.
- Designed new parsing systems for team use of per bucket per cell transition data.
- Integrated new throttling system into team's lifecycle action enqueueer to begin use

Software Engineer**Pure****Jan 2023 – May 2022**

- First engineer implementing database solutions and building API connections to apps, web pages, and internal analytics systems through AWS tools and custom internal systems.

SWE Intern**Amazon AWS S3****May 2022 – Aug 2022**

- Implemented data recording systems in Java with storage in DynamoDB on an existing data throttling tool for use in an operator dashboard.
- Designed API's for exposure of tracked data using Java and Amazon's Coral structure.
- Developed my team's first internal dashboard with TypeScript and React to display data collected from the Throttle Tool and other future tools with intuitive and reliable user interfaces fitting Amazon's style.

Software Engineer**Ventorlux****Jun 2019 - Jan 2021**

- Biotechnology company focused on removal of pathogens from the air via UV-C radiation.
- Embedded software developer, Embedded electronics developer, Electrical power design for UV-C radiation devices, Front and Back end web developer.

PROJECTS**Modular Robot & Control System**

- github.com/carterDWatts/miniBot
- Small, modular, tank like, platform robot that receives movement controls via mesh network. Consists of two electrically and programatically separate pods with tank style tread. Programming in C++ and electronic design in Autodesk Eagle.

Motion Control System

- github.com/carterDWatts/powerGlove
- Hand orientation and acceleration based control system that communicates through mesh network and interfaces with multiple devices. Programming in C++ and electronic design in Autodesk Eagle.

RELEVANT BERKELEY CLASSES

- **CS 170** Efficient Algorithms and Intractable Problems
- **CS 188** Introduction to Artificial Intelligence
- **CS 186** Database Systems
- **EECS 106A** Robotics
- **CS 70** Discrete Mathematics and Probability Theory
- **CS 61 A-C** Data Structures, The internal organization and operation of digital computers, Machine architecture, Elements of computer logic design.
- **EECS 16 A-B** Signal processing, learning, control, and circuit design. Linear-algebra. Building modern information devices.

LANGUAGES AND TECHNOLOGIES

- Java, Python, C++, C, C#, Processing, JavaScript, Node.js, HTML, CSS, Git, Arch Linux, Linux, Autodesk Eagle, MongoDB, AWS, S3, RDD, DynamoDB, React, SQL, RISC-V, Assembly, Latex, TypeScript
